Introducing indici AI Copilot

We are delighted to introduce indici AI Copilot, an AI-powered suite of tools designed to enhance clinical workflows and bring substantial efficiency gains to medical practices.

As the Copilot will be integrated across a swathe of core features within the indici platform, we are **gradually rolling it out** to allow users time to adapt. This phased approach ensures:

- **A smooth transition without disrupting clinical workflows**

- **Time for users to get accustomed to each new feature**
- **Minimal support issues before expanding AI capabilities**

** Your feedback is crucial!**

We have always taken a collaborative approach in the design and development of Indici to ensure that user experience is prioritised, and the roll out of the Copilot is no exception. So get in touch and let us know how you are getting on, so we can continue to improve our offerings with **intelligent, efficient, and user-friendly tools**.

Phase 1: AI-Powered Transcription

AI Transcription Services

As an Indici clinical user, you will be able to take full advantage of the Copilot's AI-driven transcription services from the outset. By converting your patient interactions into structured clinical notes within seconds, the Copilot dramatically reduces the amount of time you need to spend documenting your consultations.

Clinical note conversion is performed by multiple established AI processors, all of which are continuously enhancing their capabilities. Therefore, we have taken a flexible approach, allowing practices to choose the service that best suits their needs.

At present, we offer practices a choice of the following AI processors:

ChatGPT 4.1 (hosted on Azure)

Claude Sonnet 4 (hosted on AWS)

Heidi

(Please note processors may be added or subtracted as appropriate in future updates.)

Indici Transcriber App

To further enhance transcription accuracy, we have also rolled out the **Indici Transcriber app**, which allows clinicians to use their **mobile phones as recording devices** during consultations. This promotes **better audio quality**, improving the accuracy of AI-generated transcripts. Over time, we will introduce more features to the app, focusing on continuously improving efficiency and user experience.

AI Usage, Credits, & Subscription Management

AI services require significant **computational resources**, measured in **credits or tokens**, which are consumed based on usage. Most AI platforms use a **pay-per-use model**, requiring users to either purchase tokens or subscribe to a plan with a defined number of tokens.

However, we have worked to streamline our users' AI experience by including a **comprehensive credit and subscription management system** within *indici*. This allows practices to:

- ✓ Purchase and allocate AI credits
- ✓ Restrict AI model usage per user
- ✓ Set minimum credit thresholds and receive automated alerts when credits need to be replenished

Some AI providers may use an **annual subscription model** instead of tokens. *indici* supports seamless handling of such subscriptions, with automated notifications and subscription renewals built in.

How much does it Cost?

To support the integrated usage of external LLMs for generating consult documentation, we have built an AI Credit Manager into *indici*, where practices can top up their AI Credit and allocate it to their providers as required. Whenever a provider processes a consult using AI, the relevant charge will be deducted from their AI Credit balance. Details on how to manage AI Credit are provided further down in this document.

The cost of processing a consult will vary depending on the length of the consult recording, the template, and the LLM. However, as an *approximate* guide and based on previous usage, a consult typically costs between \$0.20 and \$0.40 (NZD).

Beyond Phase 1

Upcoming AI-powered Features in *indici*

In addition to transcription and note conversion, we will soon be introducing a wide range of practice-boosting AI features, including:

 AI-assisted clinical letter writing that integrates:

- Timeline notes
- Medication lists
- Inbox documents
- Other relevant clinical data

 AI-powered inbox management:

- Auto-file results
- Trigger actions for abnormal findings
- Streamline document handling

Summarization of discharge summaries to easily extract key data for patient records

 **AI-powered natural language query builder** to replace the existing advanced report builder

 **Photographic analysis** using AI for clinical decision support

 **OCR for automated filing** of scanned documents

 **AI-enhanced patient timeline search** for rapid access to relevant records

 **Voice-enabled commands for non-clinical tasks**, like:

- Booking appointments
- Creating reminders
- *(Future updates will include voice-assisted prescribing.)*

 **AI avatars for patient-led pre-consult history-taking**, presenting structured history summaries to clinicians

 **AI-driven invoice analysis for error detection and claims management**

 AI-Based Prescribing and Medication Reconciliation

-  **AI-assisted dose titration** for more accurate medication prescribing
-  **Medication reconciliation** from multiple sources

- 💊 **Integration with NZF** for drug interaction checks
- 💊 **Guideline-based prescribing recommendations**
- 💊 **Script line-based prescribing** for improved medication management

Auditing AI-Based Transcriptions

Since AI-powered transcription is a **new and evolving technology**, we have developed **robust auditing features** to ensure accuracy and accountability:

- **Comprehensive logging of all AI activities**
- **Access to raw, processed, and edited transcripts**
- **Detailed audit trails to assess AI performance over time**

This feature is currently available to selected users. If you are interested, please contact your indicati representative. It will be rolled out to the wider user base in future updates.

Copilot User Guide

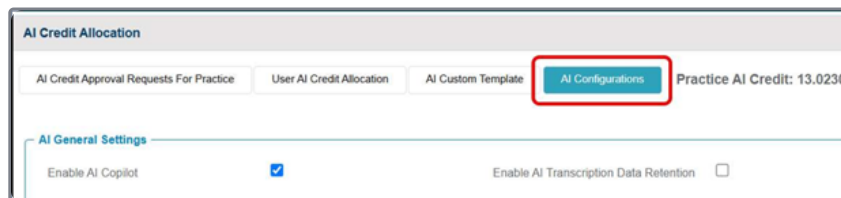

How to Configure and use AI Transcription

Configuration

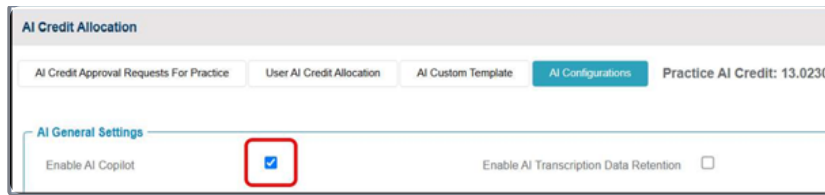

Enabling indicati AI Copilot

To enable indicati AI Copilot for your practice:

1. Go to *Configurations > AI Configuration > AI Credit Allocation*
2. Click the *AI Configurations* tab

3. Mark the *Enable AI Copilot* checkbox:
-

4. You can also manage transcript retention from here. This refers to the transcript that is created from your interaction with your patient prior to being sent to an LLM for processing. If you wish the transcript to be kept in the patient's file indefinitely, leave the *Enable AI Transcription Data Retention* unmarked. However, if you wish to set a definite limit, after which the transcript will be automatically deleted, check this checkbox and then set the limit in hours using the *Retention Period (in Hours)* field:

5. Once you are happy, click **Save**

Requesting AI Credit

As mentioned in the introduction, AI services consume tokens or credits in order to operate.

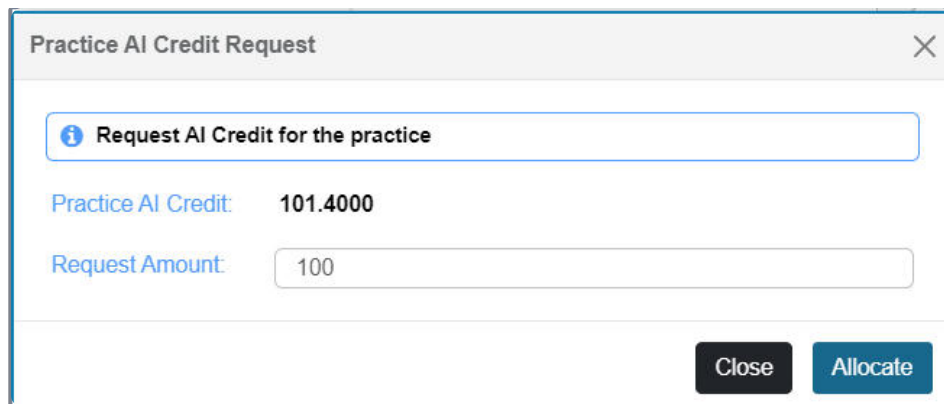

Please Note: Your user role or user type must be "Practice Manager" before you can proceed with these steps.

To request credit for your practice:

1. Go to Configurations > AI Configuration > Cost Allocation
2. Click the *Request AI Credit for Practice* button in the top right corner:

Request AI Credit For Practice

3. In the window that opens, you will see your practice's current credit balance. To request a new amount, simply type that amount into the *Request Amount* field and click *Allocate*:

Practice AI Credit Request

Request AI Credit for the practice

Practice AI Credit: 101.4000

Request Amount: 100

Close Allocate

4. Your request will be sent to the indici team who must approve it before the credit is allocated to your practice. You can view both your pending/unapproved and approved requests from this screen using the search facility at the top:

AI Credit Approval Requests For Practice User AI Credit Allocation Practice AI Credit: 101.4000

Approved Unapproved Request AI Credit For Practice

Location Name: indici Demo Practice From Date: 17/08/2024 To Date: 16/09/2024

Reset Search

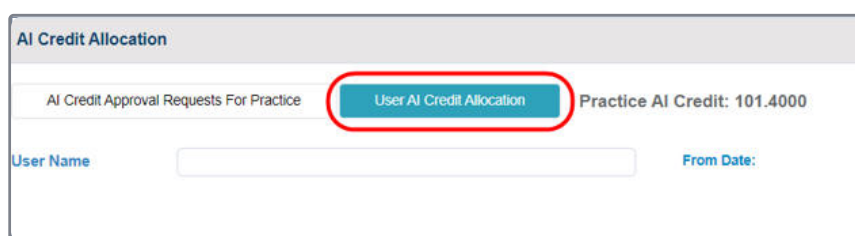

5. Once your request has been approved, your Practice's Credit Balance will be updated accordingly

Allocating Credit to Users

When your practice has sufficient AI Copilot credit, the next step is to allocate it to relevant staff members who will then be able to utilise the AI Copilot.

To do this:

1. Go to *Configurations > AI Configuration > AI Credit Allocation*
2. Click the *User AI Credit Allocation* tab:

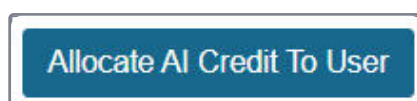

AI Credit Allocation

AI Credit Approval Requests For Practice **User AI Credit Allocation** Practice AI Credit: 101.4000

User Name: From Date:

3. Click *Allocate AI Credit to User*:

Allocate AI Credit To User

4. In the pop up that opens:
 - a. Select the user you wish to allocate credit to
 - b. Enter the amount in the *AI Credit* field
 - c. Mark *Activate*
 - d. Select the AI model (or models) you wish to make available to this user:

Allocate AI Credit To User

Request AI Credit for the user

Practice AI Credit: 101.4000 User Remaining AI Credit: 0.0000

User: Joseph DANTE

AI Credit: 10

Activate: ☒

AI Model: GPT 4o - Most Advanced, gemini - 1.5 - flash, Nabla Copilot - Fastest

Search

select all

- ☐ Healthindici Better Accuracy - Sonnet
- ☐ Healthindici Fast Response - Haiku
- ☒ GPT 4o - Most Advanced
- ☒ gemini - 1.5 - flash
- ☒ Nabla Copilot - Fastest
- ☐ Nabla Copilot - Highest Quality

- e. Click *Allocate*, and then click *Yes* in the pop-up to confirm
5. You can edit or delete a user's credit at any time using the respective icons in the Action column:

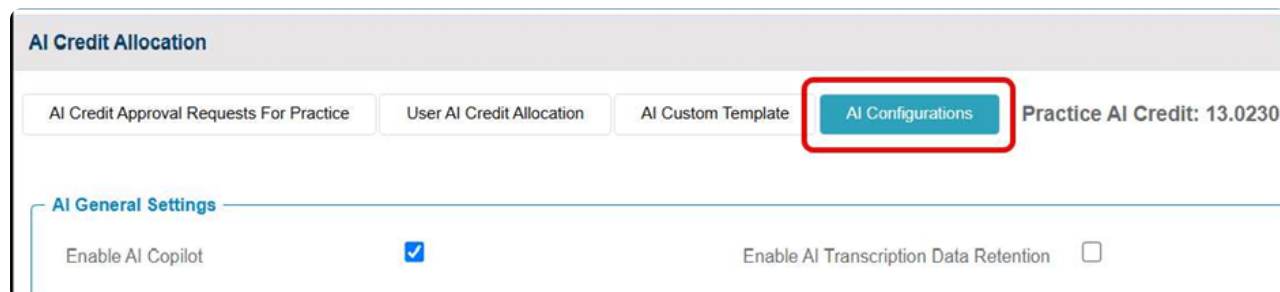

Managing Minimum Credit Thresholds

You can set Minimum Credit Amounts for indici AI Copilot at both a practice and provider level. What this means is that if a practice's AI credit falls below the defined minimum amount, then a task can be automatically sent to the practice manager, prompting them to request additional credit.

Likewise, a minimum amount can be set for providers within the practice. If a provider's credit amount falls below the defined minimum, they will be automatically allocated additional credit from the practice's fund.

To set up these configurations:

1. Go to *Configurations > AI Configuration > AI Credit Allocation*
2. Click the *AI Configurations* tab:

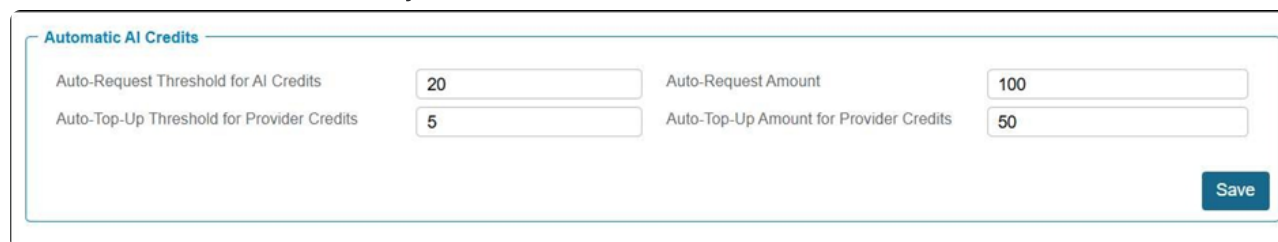

AI Credit Allocation

AI Credit Approval Requests For Practice User AI Credit Allocation AI Custom Template **AI Configurations** Practice AI Credit: 13.0230

AI General Settings

Enable AI Copilot ☒ Enable AI Transcription Data Retention ☐

3. At the bottom of the screen, you will see the *Automatic AI Credits* section

Automatic AI Credits

Auto-Request Threshold for AI Credits Auto-Request Amount

Auto-Top-Up Threshold for Provider Credits Auto-Top-Up Amount for Provider Credits

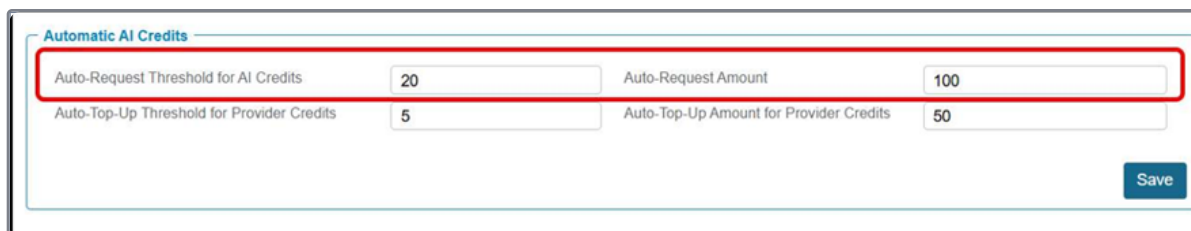

Save

Managing Minimum Amounts for the Practice

To set a minimum amount for the practice:

1. Enter the value in the *Auto-Request Threshold for AI Credits* field.
2. Next, enter the amount the practice should request if they fall below the stated minimum in the *Auto-Request Amount* field.
3. Click *Save*.

In the image below, if the practice's AI credit falls below 20 credits, a task will be automatically generated for the practice manager, prompting them to request a credit amount of 100 from the indici team:

Automatic AI Credits

Auto-Request Threshold for AI Credits Auto-Request Amount

Auto-Top-Up Threshold for Provider Credits Auto-Top-Up Amount for Provider Credits

Save

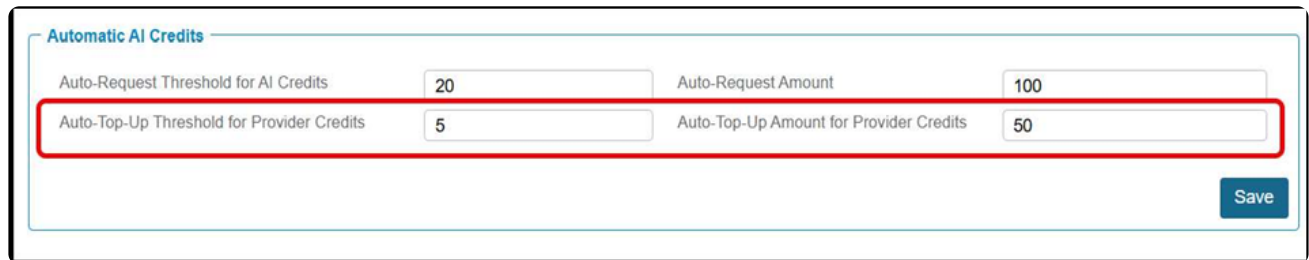

The practice manager will do this by contacting the indici team via email.

Managing Minimum Amounts for Providers

To set a minimum amount for providers within the practice:

1. Enter the value in the *Auto-Top-Up Threshold for Provider Credits* field.
2. Next, enter the amount the provider should automatically be topped up by if they fall below the stated minimum in the *Auto-Top-Up Amount for Provider Credits* field.
3. Click *Save*.

In the image below, if a provider's AI credit falls below 5 credits, they will automatically receive an additional 50 credits, which will be allocated to them from the practice's AI credit fund:

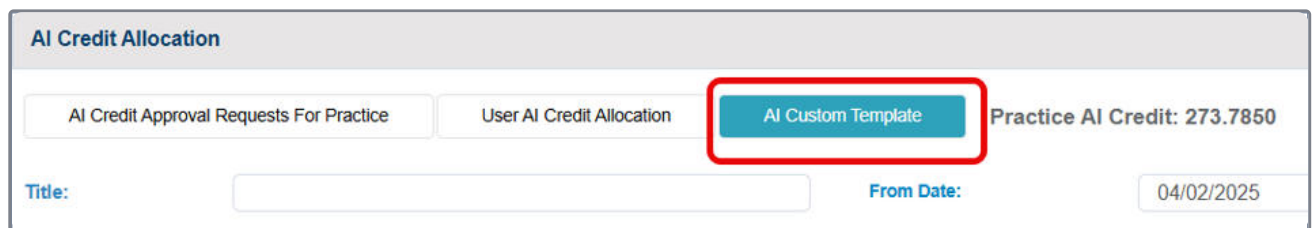

Automatic AI Credits			
Auto-Request Threshold for AI Credits	20	Auto-Request Amount	100
Auto-Top-Up Threshold for Provider Credits	5	Auto-Top-Up Amount for Provider Credits	50
Save			

Setting up Custom Templates

You can set up your custom templates, which will be used to instruct the selected AI processor (e.g., Chat GPT) on how to organise your structured notes post-processing.

To create a custom template:

1. Go to *Configurations AI Configuration > AI Credit Allocation*
2. Click the *AI Custom Template* tab:

AI Credit Allocation			
AI Credit Approval Requests For Practice	User AI Credit Allocation	AI Custom Template	Practice AI Credit: 273.7850
Title:		From Date:	04/02/2025

3. In the top right corner, you can choose whether you want to allow your users to use the system-generated template (i.e., the template provided by the indici Team), custom templates, or both:

Show Template: ☐ System ☐ Custom ☒ Both

4. Click the *Plus* icon to add a custom template:

Show Template: ☐ System ☐ Custom ☒ Both

5. In the window that opens:

- a. Enter the title of the template in the *Title* field
- b. In the *Template* field, enter the prompt for the AI processor on how you want your notes to be presented. In other words, you are instructing the AI on how to organise the consultation information
- c. In the *Description* field, you can type a description of the template for information purposes
- d. Mark the *Active* checkbox to make the template available
- e. If you wish this template to be the default (i.e., when the provider opens the **AI Transcribe** section, this will be the template that is pre-selected), mark the *Default* checkbox:

AI Custom Template

Title: Custom Template 02

Template: Provide a brief overview of patient condition, along with plan, assessment, medications, and precautionary measures

Description: Template for brief overview of patient clinical condition

Active: ☒

Default: ☒

Close Save

f. Click *Save*:

6. All saved templates will appear in the grid below. You can edit or delete custom templates by clicking on the respective icons in the *Action* column. Please note, you cannot delete system templates:

Once templates are made available, users will be able to select them from the *Template* field in the **AI Transcribe** section within the patient's Consult File:

A screenshot of the 'AI Transcribe' interface. At the top, there's a 'Provider Credit: 8.992' label. Below it, the 'Model' is set to 'ChatGPT 4o (Hosted on Azure)'. The 'Template' dropdown menu is open, showing options: 'SOAP Notes Only', 'Custom Templates' (with a sub-menu), 'Custom Prompt 01', 'Custom Template 02' (highlighted in blue), and 'Custom Template 03'. A red box highlights the 'Custom Templates' sub-menu and its options. A checkbox labeled 'I have obtained patient consent to utilize AI.' is visible on the left.

Managing Access

Enabling Users to Access the Copilot

To ensure a user has access to indic AI Copilot:

1. Go to *Configurations > AI Configuration > AI User Configuration*
2. Search for the user in question using the *Search by Name* field
3. Ensure the *Manage AI Access* checkbox is marked

A screenshot of the 'AI User Access Rights' table. The table has columns: Name, Profile Type, Code, DOB, Full Address, Mobile, Email Address, User Name, and Manage Access. A red arrow points from the 'Search by Name' field (containing 'joseph dante') to the 'Manage Access' checkbox in the row for 'Joseph DANTE'. The checkbox is checked.

Name	Profile Type	Code	DOB	Full Address	Mobile	Email Address	User Name	Manage Access
Joseph DANTE	Doctor	JoDa					JoseDa001	☒

Access Permissions

A number of access permissions have been added to the indici Access Permissions Matrix. To open this matrix:

Go to *Configurations > User Management > Access Rights*

Here you will see the following new permissions:

AI Configuration

Under Configuration, expand AI Configuration. This allows you to control which user roles have access to:

- AI Credit Allocation screen
- AI User Configuration screen

Simply mark the checkboxes under the user roles you want to have access and click *Save*:

– Configurations	Section	☒	☒	☒	☒	☒	☒	☒	☒	☐	☒	☒	☒	☒	☒	☒

Using indici AI Copilot

Using Azure OpenAI, or Claude Sonnet

If you have been given access to indici AI Copilot by your practice and allocated sufficient AI credit, you can use indici AI Copilot to assist in documenting your patient consults. Depending on how your practice has set up the Copilot, you may have the choice of using one or multiple AI processors.

When using Azure OpenAI or Claude Sonnet, please follow the steps below.

Documenting your Consult

To document your consult:

1. Begin the consult as you normally would
2. In the right-hand section of the patient's Consult File, click the *AI Transcribe* tab:

Timeline & Health Plans

Timeline Prompts Inbox Outbox Problem / Medications **AI Transcribe**

AI Transcribe 00:00 **Provider Credit: 10**

AI Model: GPT 4o - Most Advanced **Notes Template:** SOAP

☐ I have obtained patient consent to utilize AI.

3. Here you will see your remaining AI Credit
4. You can select the AI model you wish to use (this list will depend on which models your practice has made available), as well as the Notes Template you wish the notes to be processed into (e.g., SOAP)
5. To set your preferred model and template, click the respective stars so that they turn yellow. Once the AI finishes processing the content, these will be considered your preferred options and preselected for future processes:

Timeline Prompts Inbox Outbox Problem / Medications Form History Data

AI Transcribe

Model: Claude Sonnet 4 (Hosted on...) **Template:** SOAP Notes - Basic

☒ I have obtained patient consent to utilize AI. **AI Credit: 14.78**

▶ Start 00:00

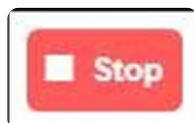

6. You also need to mark that the patient has consented to the use of AI during their consultation:

The screenshot shows the 'AI Transcribe' section of a medical software interface. At the top, there are tabs for 'Timeline', 'Prompts', 'Inbox', 'Outbox', 'Problem / Medications', and 'Form History Data'. Below these, the 'AI Transcribe' tab is active. It displays 'Model: Claude Sonnet 4 (Hosted on...)' and 'Template: SOAP Notes - Basic'. A checkbox labeled 'I have obtained patient consent to utilize AI.' is checked and highlighted with a red rectangle. To the right, it shows 'AI Credit: 14.78'. At the bottom left, there is a 'Start' button with a play icon and a timer showing '00:00'. A help icon (?) is at the bottom right.

- Click Start and confirm that you wish to allow the application to access your device's microphone (Please Note, to use this, you must have a microphone either built into your computer/phone or plugged in externally):

This screenshot is similar to the first one, showing the 'AI Transcribe' interface. The 'Start' button, which is a light blue button with a play icon and the text 'Start', is now highlighted with a red rectangle. The timer still shows '00:00'. The consent checkbox remains checked.

- Carry out your consultation with your patient, and the transcript will appear in real time. When you are finished, click *Stop*:

- The AI model you selected will automatically begin to process the text and convert it into structured consult notes:

Please wait while the notes are being generated by
indici AI Copilot Generative Model.

Processing...

10. When the AI has finished processing the content, you will see that content displayed in the same panel, but now it will be organised into the selected Notes template (e.g., SOAP) as well as Medications, Diagnoses, Referrals, etc, if applicable
11. The information generated by AI Copilot now needs to be approved before it can be saved within the patient's record

Approving AI-Processed Content

AI-processed content must be approved as follows:

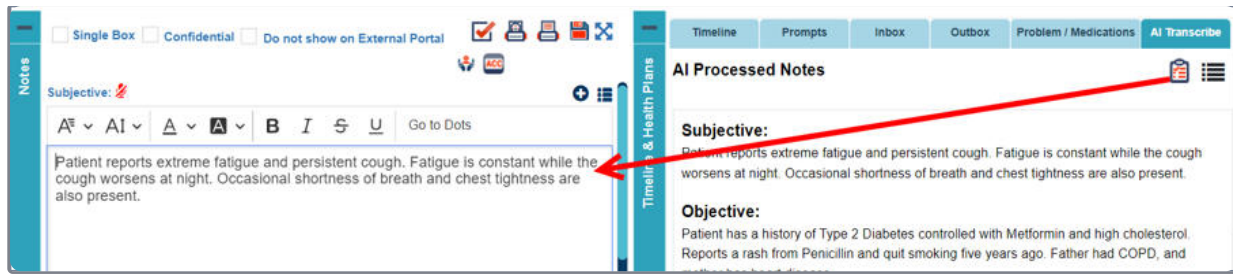

1. Consult Notes:

Review the consult notes and ensure you are happy with them. You can manually update them if you wish. Once you are happy, click this icon to save the notes into the patient's record:

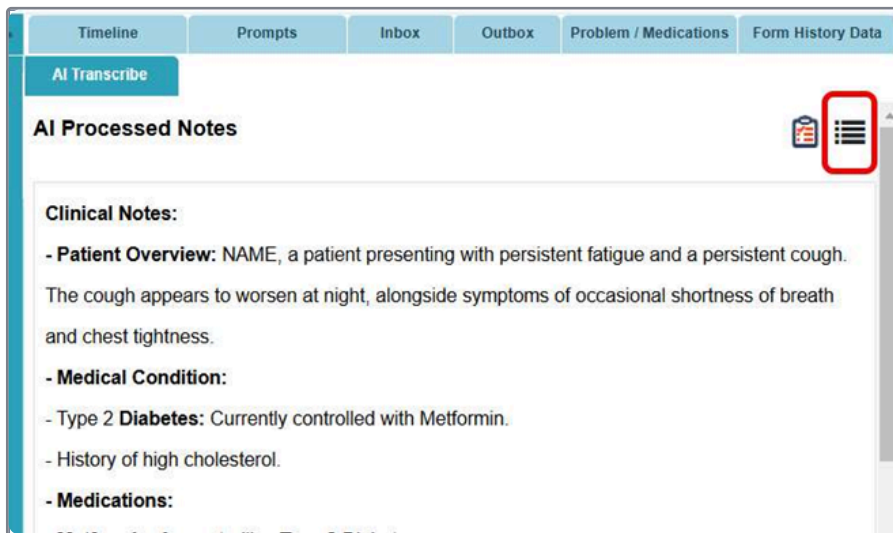

The screenshot shows a software interface with a top navigation bar containing tabs: Timeline, Prompts, Inbox, Outbox, Problem / Medications, and Form History Data. Below this is a sub-header 'AI Transcribe'. The main content area is titled 'AI Processed Notes' and contains a list of clinical notes. A red rectangle highlights a clipboard icon with a list symbol next to the title. The clinical notes are as follows:

Clinical Notes:

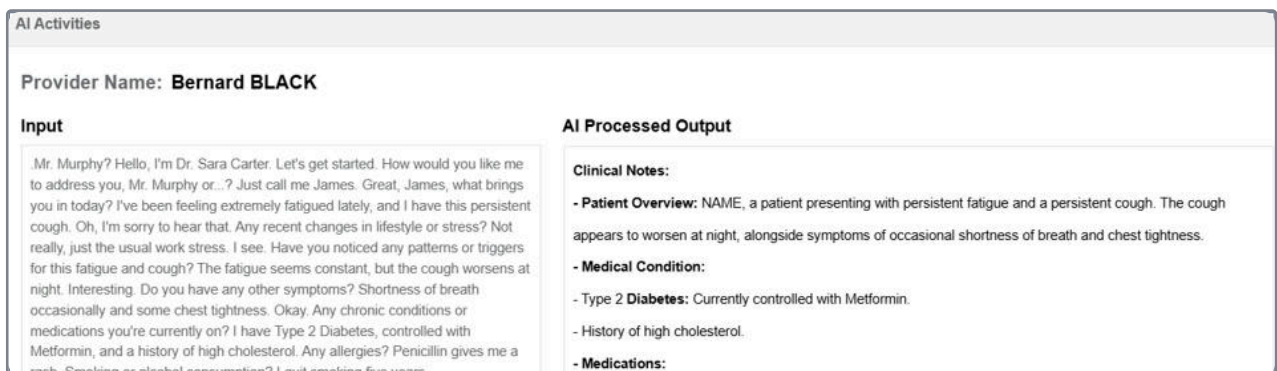

- **Patient Overview:** NAME, a patient presenting with persistent fatigue and a persistent cough. The cough appears to worsen at night, alongside symptoms of occasional shortness of breath and chest tightness.
- **Medical Condition:**
 - **Type 2 Diabetes:** Currently controlled with Metformin.
 - History of high cholesterol.
- **Medications:**

- a. You can also view the Original Transcript and AI-processed notes side by side, by clicking this icon:

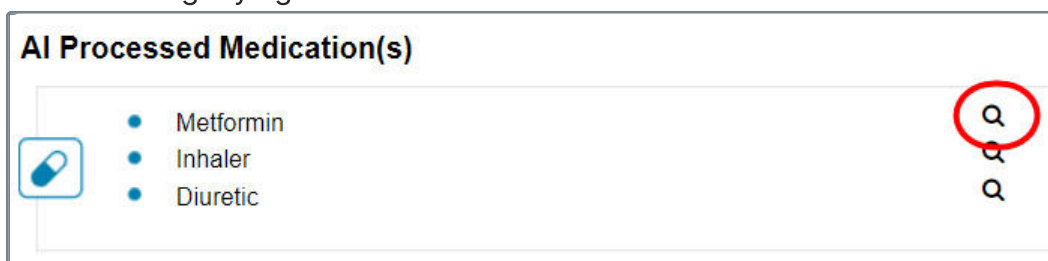

The Original Transcript will appear on the left under **Input**, while the AI-processed notes will appear on the right under **Output**:

2. Medications:

The Copilot will present suggested medications within the Medications tab based on your discussion with the patient. If you wish to generate scripts for any of these (and save the medications into the patient's record):

a. Click the Magnifying Glass icon next to them:

b. This will open the *Medication Advanced Search* window, where you can select the specific medication you require and finalise the prescription

c. For any medication that you have actioned (i.e., by generating a script), the bullet point next to it will turn to a green tick to show that it has been added to the patient's record:

3. Diagnoses, Allergies, Referrals, etc:

Other categorised information recorded during the consult can be actioned in the same way as medications. E.g., for any diagnoses suggested, if you click the Magnifying Glass icon next to them, the system will take you straight to the SNOMED Diagnosis selection window, where you can record the diagnosis within the patient's record. Likewise, for allergies, referrals, recalls, tasks, etc.

Documenting an ACC Consult

If your interaction with the patient includes information related to an accident, the AI Copilot will automatically process the transcript in the context of an ACC Consult.

Once you click *AI-Process*, the notes returned by the CoPilot will include a section. You can use these notes to automatically populate an ACC45 form by clicking the *Plus* icon next to them:

AI Processed ACC

Date : 05/10/2025.

Motorcycle accident on Tamaki Drive near Clifton Bridge intersection. Patient was riding motorcycle to work when a car suddenly pulled out of a side street and hit him. Left leg took most of the impac...

AI Processed Rad Test(s)

X-rays and scans

Back Cancel

A pop up will appear reminding you to review the form to ensure its accuracy before submitting. Click *Ok* to continue:

The Accident Details section of ACC45 form is automatically populated using AI processing based on the consultation notes. Please review all preloaded information carefully to ensure its accuracy.

OK

This will open the ACC45 form, where certain fields will be automatically filled in based on your interaction with the patient:

Accident Detail

☐ Is this a sporting injury?
 ☒ Did accident involve a vehicle?
 ☐ Is this claim for treatment injury?

☐ Is this Gradual Process injury?
 ☐ Is patient admitted to the hospital?
 ☐ Does ACC need to call Health Provider?

☐ Did the accident happen at work?
 ☐ Is assistance required?

Sport: Select Sport
 Accident Scene: Road Or Street

Location: Auckland City
 Accident Date: 05/10/2025 Today

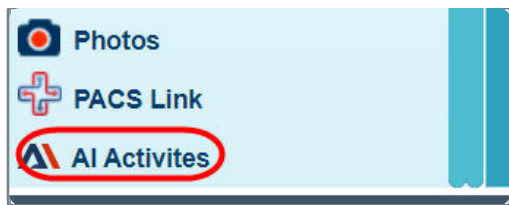

Accident Description(include mechanism of injury) / Cause of Accident: Motorcycle accident on Tamaki Drive near Clifton Bridge intersection. Patient was riding motorcycle to work when a car suddenly pulled out of a

Review the form, edit or add to it as required, and then submit as you normally would.

AI Activities

Once you have actioned/approved all of the AI-processed content you wish to include within the patient's record, you can simply leave any unnecessary remaining information as it is. Any information that has not been actioned won't be saved within the record.

You can always view your AI activities, including the original raw transcription content from the recording, by clicking *AI Activities* in the *Patient Note Functions* list:

In the section that opens, click the Eye icon next to an activity to view it in more detail:

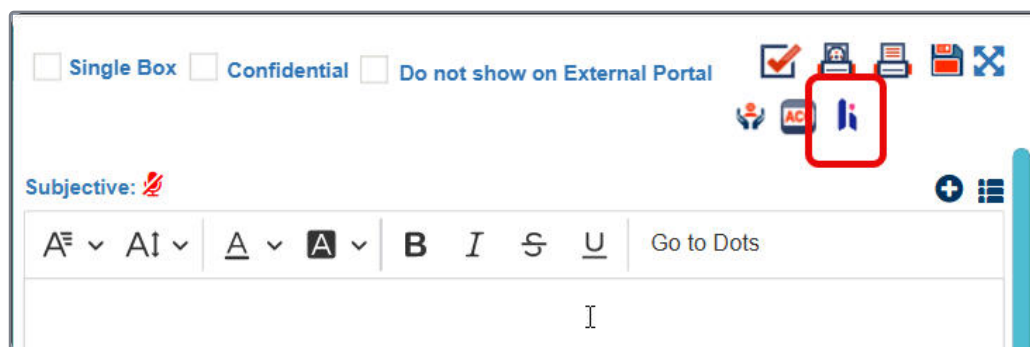

Date & Time	Provider Name	Cost	Action
16-09-2024 09:54 AM	Joseph DANTE	0.0647	

Please note that, depending on how you have set up your configurations, the original transcript may only be retained for a temporary period. You can find more details on this in the *Enabling indici AI Copilot* section of this guide.

Using Heidi

Most of the AI processors integrate seamlessly into indici, but some, like **Heidi**, require an external widget to function alongside the system. Therefore, if you are using Heidi, the workflow is slightly different. Simply follow the steps below:

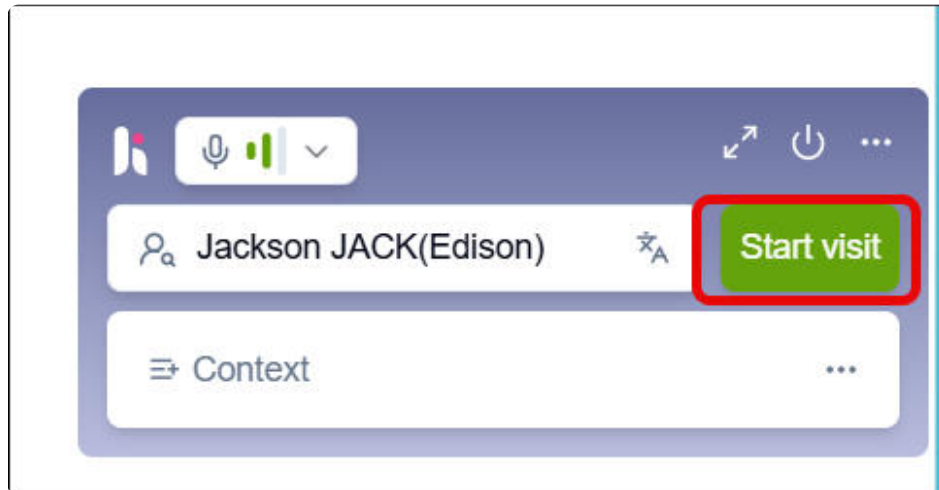

1. In the *Notes* section of the patient's Consult File, click the *Heidi* icon:

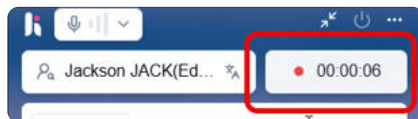

2. A pop-up will ask you to allow access to your microphone. If you want to be able to transcribe the consult, click *Allow*
3. If the Microphone icon is red, you should click to enable it. Once it is enabled, it will turn green:

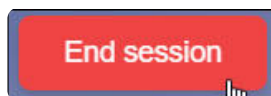

4. When you're ready to start the session with your patient, click *Start Visit*:

5. The system will create a transcription of your interaction with your patient. Once the visit is complete, hover the cursor over the timer:

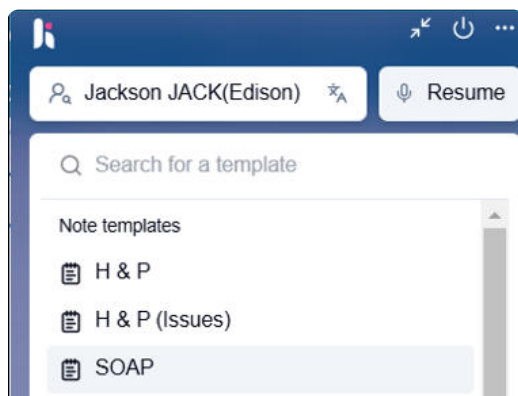

6. The button will display *End Session*. Click it to stop the recording:

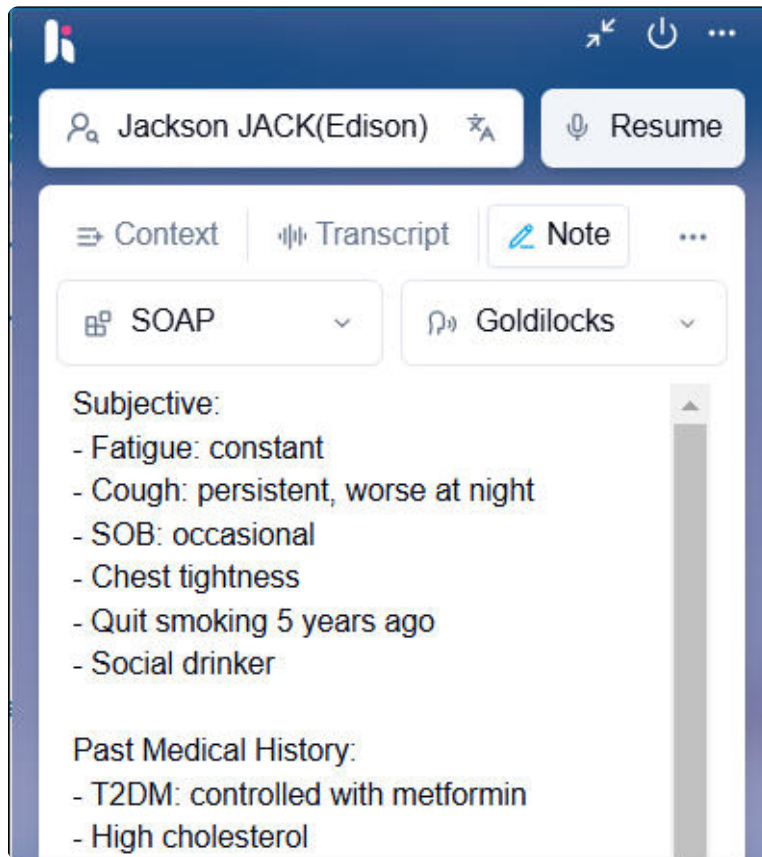

(If you wish to resume the recording, simply click *Resume*)

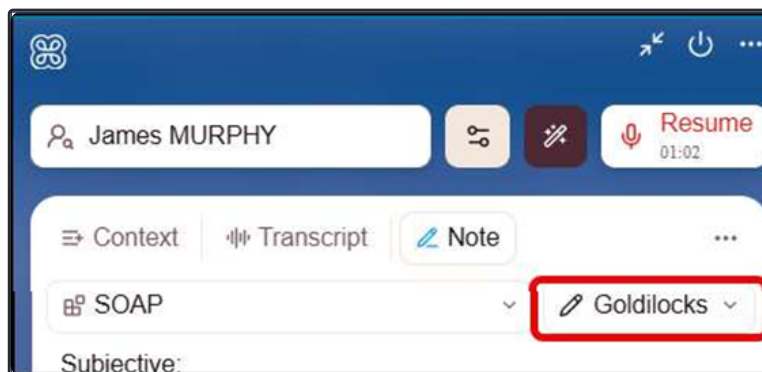

7. Once you have stopped the recording, select your desired template, e.g., SOAP:

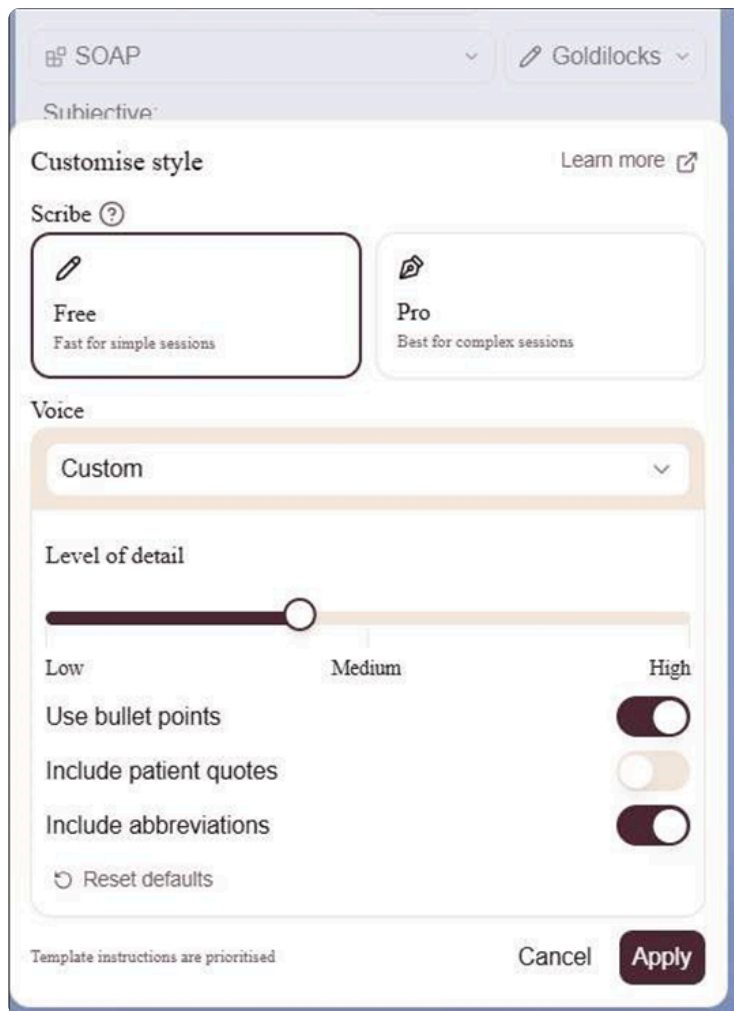

8. The Copilot will use the selected template to generate notes from your transcript, which you will see in the panel:

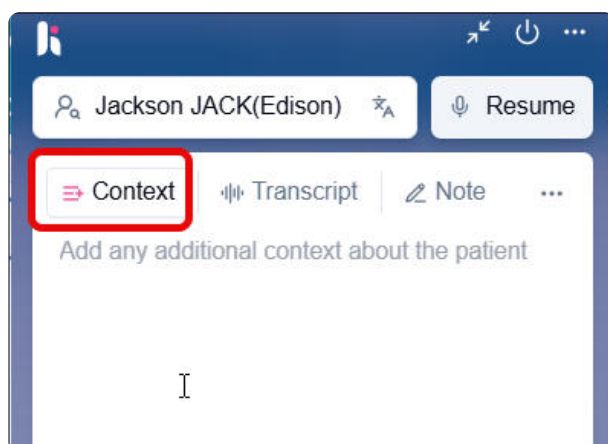

9. You can also specify the level of detail and layout of your notes by clicking the dropdown menu next to the *Template* field, selecting the appropriate options, and clicking *Apply*

10. You can manually type in some context for the session via the *Context* tab:

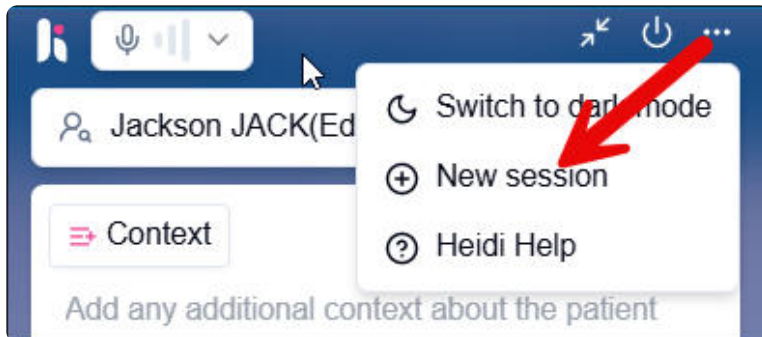

11. And you can view the unprocessed transcript of the patient session by clicking *Transcript*

12. Click *Note* to return to the processed notes

13. Once you have reviewed the notes and are happy, click *Push Note* to push these notes to the patient's file in indicati

If you want to start a new session within Heidi at any point, click the three dots icon and select *New Session*:

Please note: Heidi will only be enabled for indicati AI Copilot users.

indici AI Transcriber App

Overview

Alongside our indicati AI Copilot, we have designed and developed the indicati Transcriber app to further enhance the speed and accuracy of documenting a consultation. indicati Transcriber app allows providers to use their phone to record the interaction with their patient and then seamlessly syncs the transcribed data back to indicati.

Often, your phone will have higher levels of audio quality than the microphone built into your computer, meaning it is much better suited to generating accurate consult transcripts. This, in turn, supports more efficient outputs when you use AI to process the consult, essentially optimising the speed and efficiency of your entire consult documentation workflow.

Building on previous versions of the Transcriber app, we have pared down the process to achieve a truly streamlined user experience. All you have to do is:

- Generate a QR Code within the patient's file in indicati
- Scan the QR Code using the indicati AI Transcriber app on your mobile device
- The app will open and automatically start recording the consultation
- Once the consult is complete, the app automatically syncs the transcribed data back to the patient's file in indicati, where it can be processed through your selected AI model to produce full, structured consultation notes.

How to use the indici Transcriber App

Downloading the App

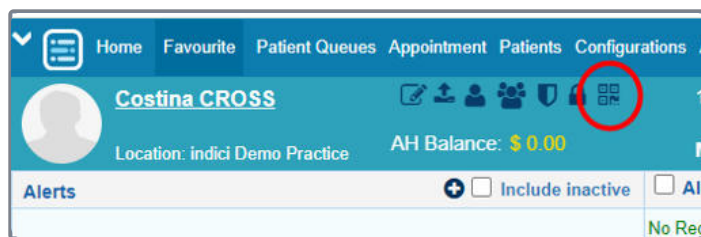

To download the indici Transcriber app:

1. Open the relevant app store on your phone (Apple App Store for iPhone users; Google Play Store for Android users) and search for “indici Transcriber app
2. Once you have found the app, click *Install*

Generating a QR Code

The next step is to generate a QR Code for the patient you are seeing. To do so:

1. Open the patient's file as normal
2. Click the *Generate QR Code* icon in the top banner:

3. The QR Code will be displayed in a pop-up for you to scan using the Transcriber App on your mobile device:

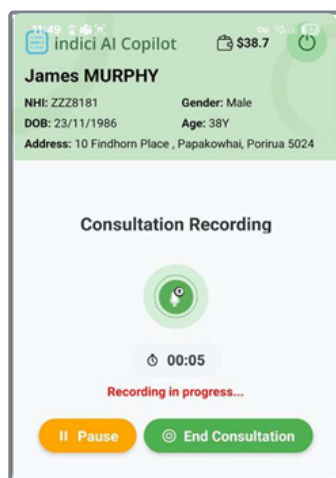

Scanning the QR Code

1. Open the indici AI Transcriber app on your mobile device
2. The app's QR code scanning feature will automatically open. Use it to scan the QR code displayed in the relevant patient's file:

3. Once the QR code has been successfully scanned, the app will automatically start recording the consult. Details for the relevant patient will be displayed at the top of the mobile screen:

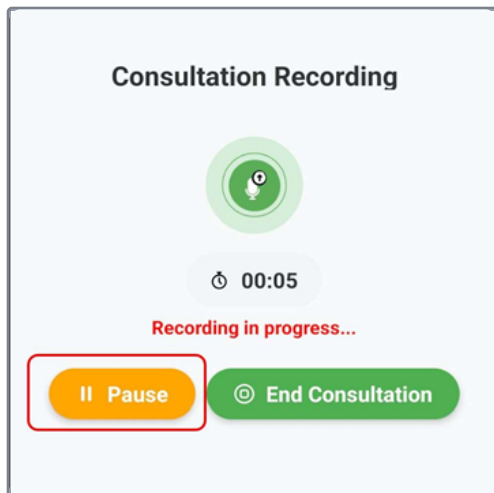

4. **Please note**, when launching the app for the first time, you may need to allow the app to send you notifications and record audio.

Recording the Consult

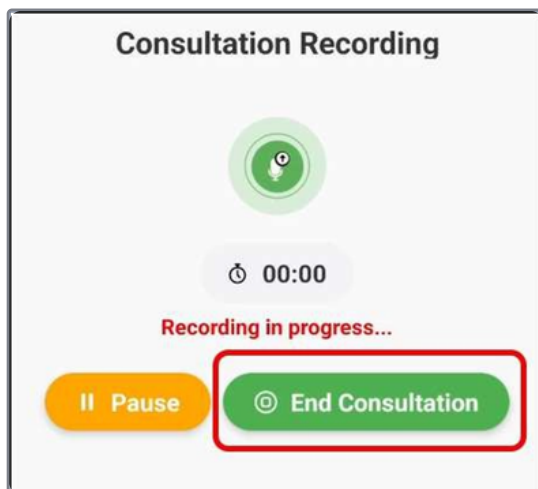

As soon as you have scanned the QR code, the app will start recording the consultation automatically. You will see the timer has been activated, and a message in red font will advise you that the recording is in progress.

You should place the phone somewhere close by and unobstructed to get the highest possible audio and reduce the potential for errors in the transcript.

Then simply carry out your consultation with your patient. If you wish to pause the recording at any point, click *Pause*. The app will not record any audio while paused:

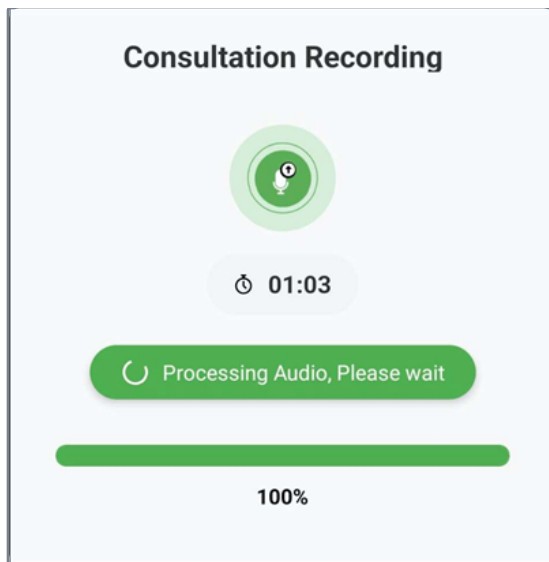

Once you are finished, click *End Consultation*:

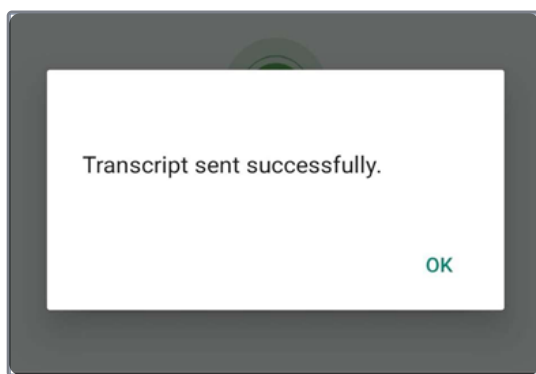

Syncing the Transcript back to indicati

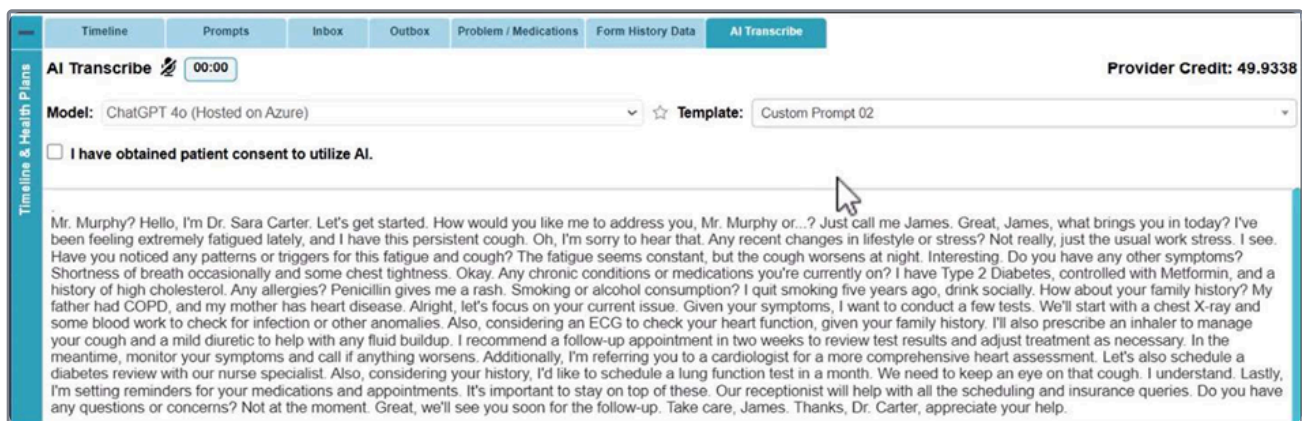

As soon as you click *End Consultation*, you will see a message advising you that the audio is now processing:

Once the processing has been completed, the app will automatically send the generated Transcript to the patient's file in indici. You will see a message advising you that it has been sent:

To view the transcript, open the patient's indici file and navigate to the **AI Transcribe** section (in the right-hand panel):

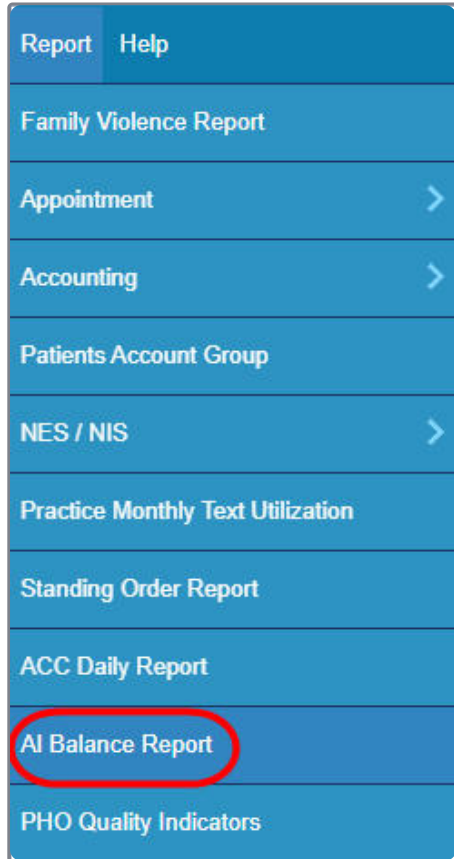

You can then process this data using a selected AI processor model as described in the previous section ([Using indici AI Copilot](#)).

AI Balance Report

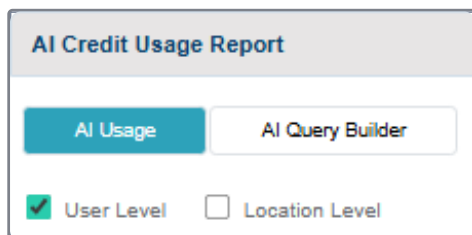

We have added a new report in indici called **AI Balance Report**, where you can view how much AI credit has been consumed and by whom.

To open this report:

1. Go to *Reports > AI Balance Report*

2. You can opt to view results by user or by location. Simply select the appropriate filter in the top left corner, and the results will be filtered accordingly:

3. You can also filter the report by Username, Patient Name, NHI, Type, and Date Range:
-
