Introduction

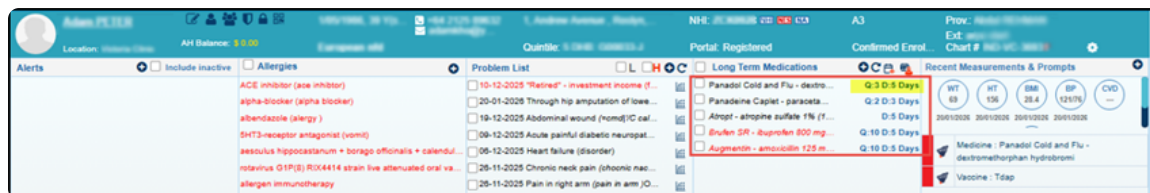

This release introduces a series of enhancements focused on improving medication visibility, prescribing accuracy, and workflow efficiency across indic. Several of these improvements also support clearer management of long-term medications and repeat prescriptions, helping practices prepare for upcoming prescription duration changes. Updates include improved long-term medication display, streamlined medication editing, updated prescription printing aligned with current NZePS standards, strengthened confidentiality controls, and clearer handling of stopped or cancelled medications. Enhancements have also been made to AI usage reporting to improve transparency and cost tracking.

Long-Term Medication Display Update

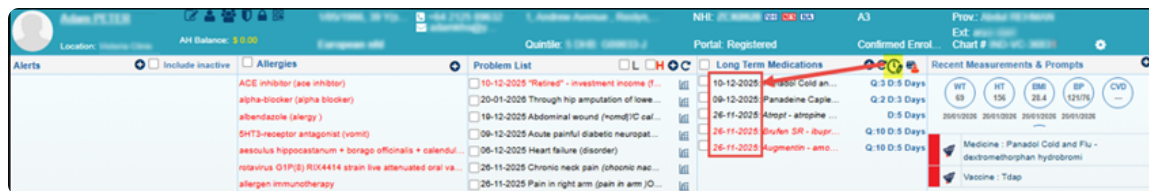

The Long-Term Medication section in the Consult top bar has been updated to improve readability and reduce visual clutter.

What's changed:

- Quantity and Duration (Q/D) are now displayed for long-term medications.

- Medication dates are hidden by default to keep the view clean.
- A new toggle icon allows users to show or hide dates as needed.

These changes improve clarity when reviewing long-term medications, particularly where prescriptions may cover longer intended treatment periods.

Print Prescription Enhancement

Prescription printing in indicati has been updated to use a new standard format, changing from the previous PDF layout to an XHTML format, in line with Health NZ (HNZ) compliance requirements.

What this means for your practice:

- Printed prescriptions may look slightly different.
- The prescribing process and information remain the same.
- This is a national standard format and cannot be customised or made practice-specific.

Why this change was made:

- To meet current Health NZ compliance standards used by pharmacies.
- To ensure consistent and reliable prescription printing across all practices.

Confidential Medication Setting

New options have been added to allow medications to be marked as **Confidential**, providing greater control over how sensitive medication information is shared and accessed.

Confidentiality levels:

- **Restricted**

Medication information is shared with the Medicine Data Repository (MDR) but is not generally visible. Access is limited to authorised users and approved MDR protocols.

- **Very Restricted**

Medication information is completely hidden and cannot be accessed or viewed in the MDR under any circumstances.

When the Confidential checkbox is selected, the confidentiality level can be chosen from a dropdown (default: Restricted).

Medication Grid – Quick Edit Enhancement

The Medication Grid (Today's Medication Activity list) has been enhanced to support quicker updates to active medications.

What's new:

- A new **Quick Edit** icon is available for current medications.
- Users can update **Quantity and Duration** directly from the Today's list.
- Changes are saved immediately after selecting **Update**.

Quantity and Duration updates remain subject to existing prescribing rules, medicine eligibility, and prescriber clinical judgement.

Displaying Prescribed and Dispensed Medicine Names

The ePS Medication History view has been enhanced with a new toggle to improve visibility of dispensing information.

What's changed:

- Prescribed medicine names are shown by default.
- A new toggle icon allows users to view dispensed medicine names.
- Users can switch between prescribed and dispensed medicine details on demand.

The screenshot shows the 'ePS Med History' tab in the 'Medications' section. It includes search filters for 'Medicine Name', 'Start Date' (04/08/2025), and 'End Date' (02/02/2026). A toggle switch is visible on the left side of the medication list, currently set to 'Prescribed'. The list contains several medications, each with a toggle icon and a status indicator (e.g., 'Prescribed: 1', 'Dispensed: 1*').

Medicine Name	18 Nov, 2025	02 Oct, 2025	30 Sep, 2025	15
☒ Paracetamol (Ethics) Strawberry Flavour (paracetamol 120 mg/5 mL) oral liquid: suspension, 200 mL, bottle (containered trade product pack) Take 5 mls three times daily as needed for pain	Prescribed: 1 Dispensed: 1*	-	-	-

☐ cefuroxime 250 mg tablet Take One tablet four times a day starting from 10/02/2026	-	-	-	-

Medication Management – Delete and Stop Functionality

The behaviour of the **Delete** and **Stop** actions has been clarified to ensure safer medication management.

Updated behaviour:

- **Medications with remaining repeats:**

When stopped or deleted, the medication becomes inactive and cannot be dispensed in the future.

- **Currently active medications:**

When deleted or stopped, the medication is marked as cancelled.

This is particularly important for prescriptions with extended repeat periods, ensuring discontinued medicines cannot be dispensed unintentionally.

AI Credit Usage Report Enhancements

The *AI Credit Usage Report* has been enhanced to provide greater visibility and improved filtering capabilities. Following changes have been implemented:

AI Usage

A **Type** search filter has been added, allowing the user to filter the AI Usage Report by AI Consultation - **SOAP Notes** or **Letters & Documents**. By default, the *Type* filter is set to **All**, displaying both SOAP Notes and Letters & Documents AI usage records. Additionally, a **Type** column has been added to the report grid, clearly indicating whether each AI usage record is associated with SOAP Notes or Letters & Documents.

AI Query Builder

A new *AI Query Builder* tab has been introduced to provide detailed insights into AI query activity. **This report includes the following information:**

- Date & Time of the query
- Query Title
- Query Description
- User Name
- AI Usage Cost

This enhancement improves transparency and helps administrators better track AI usage and associated costs.
